

ASSIGNMENT 9

AIM: Company maintain employee information as employee ID ,name,designation and salary.Allow user to add,delete information of employee.Display information of particular employee.If employee doesn't exists an appropriate message is displayed.Use index sequential file to maintain the data.

OBJECTIVE: To implement file handling and perform functions like insertion,deletion and display of data using index sequential file.

THEORY: Records in indexed sequential files are stored in the order that they are written to the disk. Records may be retrieved in sequential order or in random order using a numeric index to represent the record number in the file.The record size, specified when the file is created, may range from 1 to 8000 bytes.When an Internet Basic program opens an indexed sequential file, the Comet operating system assigns a unique record pointer to the file. Each user opening the file is assigned a unique pointer, allowing multiple users to access data from the same file at the same time. To avoid data integrity problems when more than one user is accessing a file, Comet provides a record locking mechanism. The EXTRACT statement is used to read and lock individual data records.When an indexed sequential file is opened, the record pointer is positioned at the first record. Subsequent I/O operations change the location of the pointer. Note: Some I/O operations do not move the pointer.

EXAMPLE: For example, to read all the records from an indexed sequential file in order, you would open the file and read the records without specifying an index. This would move through the file in sequential order and end when the last record was read.To read a specific record from an indexed sequential file, you would

Skill Development Lab-II 2018-19

include the KEY= parameter in the READ (or associated input) statement. The "key" in this case would be a specific record number (e.g., the number 35 would represent the 35th record in the file). The direct access to a record moves the record pointer, so that subsequent sequential access would take place from the new record pointer location, rather than the beginning of the file.

Application: Indexed sequential files are commonly used for transaction files because they take less disk space than keyed files, and are faster to read from beginning to end than a keyed file.

ALGORITHM:

1.INSERT NODE IN FILE

```
void Create()
{
    char ch='y';
    ofstream seqfile;
    ofstream indexfile;
    int i=0;
    indexfile.open("IND.DAT",ios::out|ios::binary);
    seqfile.open("EMP.DAT",ios::out|ios::binary);
    do
    {
        cout<<"\n Enter Name: ";
        cin>>Records.name;
        cout<<"\n Enter Emp_ID: ";
        cin>>Records.emp_id;
```

Skill Development Lab-II 2018-19

```
    cout<<"\n Designation";
    cin>>Records.des;
    cout<<"\n Enter Salary: ";
    cin>>Records.salary;
    cout<<Records.name<<" "<<Records.emp_id<<"
"<<Records.salary;
    seqfile.write((char*)&Records,sizeof(Records));
    Ind_Records.emp_id=Records.emp_id;
    Ind_Records.position=i;

indexfile.write((char*)&Ind_Records,sizeof(Ind_Records));
    i++;
    cout<<"\nDo you want to add more records?";
    cin>>ch;
}while(ch=='y');
seqfile.close();
indexfile.close();
}
```

2.DISPLAY FILE

```
void Employee::Display()
{
    ifstream seqfile;
    ifstream indexfile;
```

Skill Development Lab-II 2018-19

```
seqfile.open("EMP.DAT",ios::in|ios::binary);
indexfile.open("IND.DAT",ios::in|ios::binary);
cout<<"\n The Contents of file are ..."<<endl;
int i=0;
while(indexfile.read((char
*)&Ind_Records,sizeof(Ind_Records)))
{
    i=Ind_Records.position*sizeof(Rec);
    seqfile.seekg(i,ios::beg);
    seqfile.read((char *)&Records,sizeof(Records));
    if(Records.emp_id!=-1)
    {
        cout<<"\nName: "<<Records.name<<flush;
        cout<<"\nEmp_ID: "<<Records.emp_id;
        cout<<"\nDesignation : "<<Records.des;
        cout<<"\nSalary: "<<Records.salary;
        cout<<"\n";
    }
}
seqfile.close();
indexfile.close();
```

```
}
```

3.SEARCH A RECORD FROM FILE

```
Void Search()
```

```
{  
    fstream seqfile;  
    fstream indexfile;  
    int id,pos,offset;  
    cout<<"\n Enter the Emp_ID for searching the record ";  
    cin>>id;  
    indexfile.open("IND.DAT",ios::in|ios::binary);  
    pos=-1;  
    while(indexfile.read((char  
*)&Ind_Records,sizeof(Ind_Records)))  
    {  
        if(id==Ind_Records.emp_id)  
        {  
            pos=Ind_Records.position;  
            break;  
        }  
    }  
    if(pos== -1)
```

Skill Development Lab-II 2018-19

```
{  
    cout<<"\n Record is not present in the file";  
    return;  
}  
offset=pos*sizeof(Records);  
seqfile.open("EMP.DAT",ios::in|ios::binary);  
seqfile.seekg(offset,ios::beg);  
seqfile.read((char *)&Records,sizeof(Records));  
if(Records.emp_id!=-1)  
{  
    cout<<"\n Record is not present in the file";  
    return;  
}  
else  
{  
    cout<<"\n The Record is present in the file and it is...";  
    cout<<"\n Name: "<<Records.name;  
    cout<<"\n Emp_ID: "<<Records.emp_id;  
    cout<<"\n Designation: "<<Records.des;  
    cout<<"\n Salary: "<<Records.salary;  
}  
seqfile.close();  
indexfile.close();
```

```
}
```

4.DELETION OF RECORD

```
void Employee::deletion()
```

```
{
```

```
    int id,pos;
```

```
    cout<<"For deletion"<<endl;
```

```
    cout<<"\n Enter the employee id for searching"<<endl;
```

```
    cin>>id;
```

```
    fstream seqfile;
```

```
    fstream indexfile;
```

```
    seqfile.open("EMP.DAT",ios::in|ios::binary|ios::out);
```

```
    indexfile.open("IND.DAT",ios::in|ios::binary|ios::out);
```

```
    seqfile.seekg(0,ios::beg);
```

```
    indexfile.seekg(0,ios::beg);
```

```
    pos=-1;
```

```
    while(indexfile.read((char  
*)&Ind_Records,sizeof(Ind_Records)))
```

```
    {
```

```
        if(id==Ind_Records.emp_id)
```

```
        {
```

```
            pos=Ind_Records.position;
```

```
            Ind_Records.emp_id=-1;
```

```
            break;
```

Skill Development Lab-II 2018-19

```
    }  
}  
if(pos==-1)  
{  
    cout<<"\n Record is not present in the file";  
    return;  
}  
int offset=pos*sizeof(Rec);  
seqfile.seekp(offset);  
strcpy(Records.name,"");  
Records.emp_id=-1;  
Records.salary=-1;  
strcpy(Records.des,"");  
seqfile.write((char *)&Records,sizeof(Records))<<flush;  
offset=pos*sizeof(Ind_Rec);  
indexfile.seekp(offset);  
Ind_Records.emp_id=-1;  
Ind_Records.position=pos;  
indexfile.write((char  
*)&Ind_Records,sizeof(Ind_Records));  
seqfile.seekg(0);  
indexfile.close();  
seqfile.close();
```

```
}
```

                break;  
            case 3:
```

Skill Development Lab-II 2018-19

```
        e.Search();
        break;
    case 4:
        e.deletion();
        break;
    }
    cout<<"Do you want to continue"<<endl;
    cin>>ans;
}while (ans=='y');
return 0;
}
```

OUTPUT:-

The screenshot shows a Windows command prompt window titled "C:\Users\admin\Desktop\SD2\assignment7\sdassignment9.exe". The program displays a menu with four options: 1.Create, 2.Display, 3.Search, and 4.Delete. The user enters '1' to create a new record. The program prompts for Name (raj), Emp_ID (1), Designation (pune), and Salary (200000). It then asks if the user wants to add more records, to which 'y' is entered. The program prompts for Name (ayush), Emp_ID (2), Designation (mumbai), and Salary (23456). It then asks if the user wants to add more records, to which 'n' is entered. Finally, it asks if the user wants to continue, to which 'y' is entered. The program then displays the menu again, showing options 1.Create and 2.Display.

CONCLUSION:-

We have successfully implemented file handling and performed functions like insertion, deletion and display of employee data using index sequential file.
